

- LESS FATIGUE
- HIGHER PRODUCTIVITY
- LESS WASTE
- ADAPTABLE TO MANY APPLICATIONS
- RETROFIT TO EXISTING EQUIPMENT

ARTICULATING DISPENSE ARM

FEATURES

The Articulating Arm permits the dispense head to be moved to the product rather than moving individual parts to the dispense head, saving time and increasing production. Operator fatigue is reduced as the total weight of the dispense head is supported by the arm, requiring only slight lateral force to move the head to the product.

- The standard assembly allows operator controlled x-y-z motion within a 12" x 18" envelope.
- The Articulating Dispense Arm can be integrated on new Systems or retrofit in the field on existing systems.
- Typical applications include point-to-point potting, encapsulating, and bonding on or off production assembly lines.
